

Written Check-In

For this project I have decided to go ahead with the Netflix Dataset. Though I don't have any specific questions in mind, I am willing to show trends like popularity of a genre, rise of high rating content from countries, and other interesting trends. At the moment, I have created a visualization, as part of data exploration, that shows different genres and their IMDB ratings. The plot also uses bubble size for TMDB popularity.

As you can see, though the plots are very appealing due to the use of multiple colors, it still doesn't show any useful information. I am in the process of filtering the data by genre, country, year, and IMDb scores. Hopefully, through these filters, I hope to come up with interesting plots!
